

ABSTRACT OF THE DISCLOSURE

5 A method and an apparatus for manufacturing an
image displaying apparatus having a display panel are
provided. A first substrate of the display panel on
which phosphor exciting means is disposed and a second
substrate of the display panel on which phosphors
emitting light by the phosphor exciting means is
provide are prepared under the vacuum atmosphere.
Then, the first and the second substrates are carried
10 in a getter processing chamber or bake processing
chamber, and getter processing or bake processing is
applied thereto under the vacuum atmosphere. After the
processing, the first and the second substrates are
carried in a seal processing chamber, where the
15 substrates are heat sealed under the vacuum atmosphere.
Thus, reduction of vacuum exhaust time and a high
vacuum degree in manufacturing an image displaying
apparatus is attained and efficiency of manufacturing
is improved.
